

## Average Worksheet

1. A school has only three classes comprised of 40, 50 and 60 students respectively. In these classes, 10%, 20% and 10% students respectively passed in the examination. The percentage of the students passed in the examination from the entire school is:
  - a. 40/3%
  - b. 38/3%
  - c. 79/6%
  - d. 23%
  - e. None of these
2. A man covers a distance at 75 kmph and returns to the starting point at 60 kmph. What is his average speed?
  - a. 45 kmph
  - b. 30 kmph
  - c. 75 kmph
  - d. 60 kmph
  - e. None of these
3. There are 25 ladies and 20 gentlemen in the club. The average age of the ladies was 48 while that of gentlemen was 50. Find the average of age of the club?
  - a. 49.99 years
  - b. 46.88 years
  - c. 48.88 years
  - d. 46.66 years
  - e. None of these
4. In a cricket match, if the average score of Raju, Mohan and Jay was 8 less the average score of Nigam, Mohan and Jay then find the difference between run scored by Nigam and Raju.
  - a. 24 runs
  - b. 23 runs
  - c. 21 runs
  - d. 25 runs
  - e. 30 runs
5. Out of 11 attempts for the predictions, if the prediction has full rating based 10 and then the least is 1. The differences of the average of the predictions best 10 to that of worse 10 was 9 so find the difference of the best and worse predictions?
  - a. 60
  - b. 68
  - c. 80
  - d. 90
  - e. 100
6. The combined average monthly salary of employees in department A and department B of factory XYZ is Rs. 1200 and the average monthly salary of 200 employees in department A is Rs. 900. If the average monthly salary of employees in department B is Rs. 1400, find the number of employees in department B.
  - a. 200
  - b. 400
  - c. 150
  - d. 300
  - e. 350
7. The average age of 60 students and a teacher is 24 years. The average are of only the students is 0.4 less than the average age of the 60 students and the teacher. Find the age of the teacher in years.
  - a. 55 years
  - b. 58 years
  - c. 60 years

- d. 63 years
  - e. None of these
8. If the total wage of group of men and women is Rs. 175 and if the total wage of women is Rs. 168 to that of men is Rs. 181. Then find the ratio of Men to that of Women?
- a. 5:13
  - b. 7:6
  - c. 6:7
  - d. 6:13
  - e. None of these
9. A teacher while calculating the average marks of 50 students of a class in mathematics by mistake enters 45, instead of 54 and obtains the average as 63. Find the actual average of the class.
- a. 63.18
  - b. 62.72
  - c. 53.28
  - d. 64
  - e. Could not be determined
10. The average ages of 4 people namely Ashish, Bhavin, Mahesh and Bhuvan four years ago was 45. The present average are of five people, which includes Kelvin is 55 years. What is the present age of Kelvin?
- a. 59
  - b. 65
  - c. 69
  - d. 79
  - e. 89
11. A is the average of a series of  $n$  consecutive odd numbers starting with  $x$  and B is the average of  $n$  consecutive odd numbers starting with  $x + 4$ . The value of  $(B - A)$  is:
- a. is always 4.
  - b. depends on  $x$ .
  - c. depends on  $n$ .
  - d. is always multiple of 4
  - e. depends on  $x$  and  $n$  both
12. Ramu appears in six different papers in his semester examination, where the maximum marks were 50 for each paper. His marks in these papers are in the proportion 8 : 9 : 10 : 13 : 14 : 15. Considering his aggregate in all the papers together, he fails to obtain 50% of the total marks. What is the minimum possible additional marks Ramu should get to obtain 50% of the total marks, given that he got integral marks in each paper?
- a. 81
  - b. 57
  - c. 12
  - d. 18
  - e. None of these
13. The average weight of 20 students in a class is 50 kg. Find the new average in each of these cases:
- (a) A student whose weight was actually 40 kg, was earlier mistaken to be 50 kg.
  - (b) A student whose weight was 40.5 kg left the group.
  - (c) Two students whose average weights were 45.5 kg left the group.
  - (d) A student whose weight was 71 kg joined the group.
  - (e) Two students whose average weight was 39 kg joined this group.
14. The average age of a group of officers goes down to 56 years from 58 years, when an old member is replaced by a young member. What is the total number of members in that team if the age difference between those two members is 30 years?
15. The average speed of a train for the first 5 hours was 63 km/hr, for next 3 hours was 58 km/hr and for next 2 hours was 72 km/hr. What was the average speed of the train for the entire journey?
